

Lactafix: Food coupling according to DIN11851

Specially designed hose coupling for food hoses.

The coupling is connected inextricably to the hose by a hydraulically press-fitted stainless clamping sleeve.

The transition of the tailpiece to the inside wall of the tube is very smooth.

This sanitary design is particularly of use for the food and pharmaceutical industry

where bacterial growth after the coupling tailpiece is a problem.

These couplings can also be fitted with safety clamps.

The associated seals are also available.

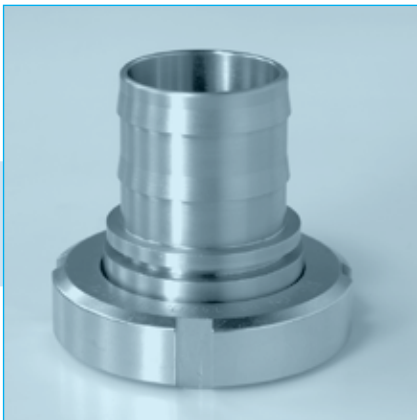

Material: Stainless steel AISI 304 or 316.

Also available according to DIN 11864 and SBS.

Type ECM: coupling with male thread

Material	Material

Note: all other food couplings and accessories are also available.

CAUTION!

No safety clamps included.
